

## ANTIBIOTICS

# ROLIN C-10

## Composition

Each gm contains

Lincomycin Hydrochloride (BP)	100 mg
Colistin sulphate (BP)	800,000 IU

## Description

Rolin C-10 plays a crucial role in poultry health by combining two key components, Lincomycin Hydrochloride and Colistin Sulphate. Lincomycin Hydrochloride is an antibiotic that targets a broad spectrum of bacteria, particularly those responsible for respiratory and intestinal infections in poultry. On the other hand, Colistin Sulphate is effective against Gram-negative bacteria, providing additional protection against certain types of bacterial infections. The synergistic action of these two components in Rolin C-10 helps maintain a healthy flock by preventing and treating bacterial diseases.

## Dosage

1 g per 2-3 liters of drinking water.

LINCOMYCIN  
WITH COLISTIN
